Typing Instructor For Kids Activator

TYPING IS IN! Typer Island, the ultimate typing adventure, has arrived on your iPad! TYPING IS IN!™ is the ultimate typing adventure that will help kids improve their typing skills in one of the most fun, interactive ways available on the App Store. The program is based on an actual typing test called Typing Instructor™ from the 1980s that was used to help children learn to type. TYPING IS IN!™ combines the best of that program with the latest scientific research and has been updated to make it even more entertaining and effective for today's young typists. See the original TYPING INSTRUCTOR™ test for kids in action: Typer Island If you have any questions or comments please email sales@noottitutor.com

The present invention relates to a method of and an apparatus for controlling the base, that is the output voltage, of a voltage regulator. A known, for example from JP-A-62-57453, a voltage regulator is known wherein a capacitor is connected between the output terminal of a regulator circuit and the base of a bipolar transistor in such a way that when the output voltage of the regulator circuit is higher than a predetermined value, that is above a reference value, the base of the transistor is connected to ground via the capacitor and is closed, whilst when the output voltage of the regulator circuit is lower than the predetermined value, that is below the reference value, the base of the transistor is maintained in an open state. A disadvantage of the known voltage regulator is that when the reference value is set at a value close to the output voltage of the regulator circuit, it is difficult to establish a difference between the output voltage of the regulator circuit and the reference value which is large enough to clearly indicate to a user that the output voltage of the regulator circuit is lower than the reference value. It is an object of the present invention to provide a method of and an apparatus for controlling the base of a voltage regulator which enables a greater difference to be established between the output voltage of the regulator circuit and the reference value, and which allows the output voltage of the regulator circuit to be clearly indicated to a user of the apparatus.

Youth homelessness is on the rise in Victoria, with one man struggling to keep his two children and himself in a tent, with the support of neighbours. Michael Richardson is living at Northcote Park, in North Melbourne, with his two children. The father-of-three says he
