## What's New in the TrafficMon?

TrafficMon is a program for monitoring and collecting data from a LAN network. It is useful for tasks like measuring network traffic, analyzing bandwidth, detecting spam, identifying computers/hosts, and storing bandwidth statistics. It has a simple interface, and it can be used either in the graphical form, or in a command-line window. The program uses the WMI technology, which allows a user to interact with the program using the command line, the Graphical User Interface (GUI), and from scripts, using the application programming interface (API). NetMon Description: NetMon is a network monitoring program that enables the user to see the exact details of the network traffic on a network or LAN. Netmon is small, compact and extremely easy to use. The Netmon is designed for the novice and experienced network administrators, alike, and enables them to quickly and easily monitor and troubleshoot a network. Network Monitor Description: Network Monitor is an easy to use tool that helps you detect, prevent, and resolve all sorts of network problems on your own. This powerful tool includes a built-in database of IP / TCP / UDP information, and delivers you real time data, also available as database, text files, and customized email notifications, of network connectivity information. Network Monitor is a software tool designed for the sole purpose of tracking information and reporting on all aspects of the network. NetTool Description: NetTool is a light-weight Network Monitoring Tool that has an easy to use, simple interface and an amazing number of features and advantages. NetTool features monitoring tools for many standard network components such as IP, ARP, TCP, ICMP, DNS, NFS, and UDP protocols. All these standard protocols can be monitored from all the standard interfaces including IP, TCP and UDP. Network Monitor Description: Network Monitor is an easy to use tool that helps you detect, prevent, and resolve all sorts of network problems on your own. This powerful tool includes a built-in database of IP / TCP / UDP information, and delivers you real time data, also available as database, text files, and customized email notifications, of network connectivity information. Network Monitor is a software tool designed for the sole purpose of tracking information and reporting on all aspects of the network. SIPconfig Description: SIPconfig is a utility to help you administer sip phones and an ekiga client (ekiga.org) that is powered by libavahi. SIPconfig works with either a serial console or via TCP/IP. It is similar to ipconfig on windows. It displays the network connections, IP, MAC addresses, if the destination ports are open or closed, and the SIP protocols that are available. It allows you to manage sip phones and sip clients over a network. With SIPconfig, you can manage your SIP phones and sip clients. You can configure SIP client networks, the
