FreePortal is an interesting app that, instead of offering a series of pages, will show the contents of a video. You can choose among different resolutions, but the app offers a series of handy features that will help you obtain all the information that you need.

There are three main functions: video display, text display and WIMP controls. The first one shows you the image of the screen, and you can scroll through the

various sections of the video. You can also use the controls to speed up the presentation of the video. The second function, on the other hand, will display the text that appears in the video. It has an advantage over the previous option because it will allow you to find the contents of a section of the video you want to see, while the other option will only help you discover the general contents of the entire video. Finally, the WIMP controls allow you to navigate through the video, and you can also search through the file with the help of a search bar. What's more, the free version of FreePortal is more than adequate for most users, as it offers all the features that will allow you to view videos. FreePortal Description: TransCutter is a simple video player that can either play an entire video or a single file. The app offers a handy interface that makes it easy for you to navigate through the video. In fact, it features a neat timeline that will help

you find the contents of a video quickly.

There are various tools that are there to make your job easier. The first one will allow you to open multiple video files, and you can specify the video you want to view.

There is also a playback button that will switch to a different video. The other main feature is the skipping option that will let you jump from one section to another. You can even set the video's duration and the audio volume. Although the interface is basic, the app works quickly and easily. It does not require any special skills and even less time to use. All in all, TransCutter is a great app that will help you view videos in no time. TransCutter Description:

VideoSplitter is an extremely simple app that allows you to split a video into separate files. The app has a very simple interface that will make you move around the menu quickly and easily. The screen, however, is pretty basic, and features a very small

PicturExtractor is a tool whose main purpose is to help you take screenshots of your desktop, but it is also equipped with cropping capabilities. This app comes with a nice, user-friendly interface and a clean layout. While the various features can be accessed from a special box, most of the UI concentrates on the screen capture that has been taken or the loaded picture. The program gives you a series of options for taking snapshots: you can either capture the entire desktop area or just the active window. The interface shows the image at full size and you can either drag it around to see the details or use the zoom in/zoom out feature for a better look. Also, from the interface, you can see the exact size of the captured image. You can either capture the entire desktop or a selected active window.

However, you can also open pictures from your disks. The “Extract selection” option, which is basically the crop function, can be applied to both screenshots and loaded images. The program only supports a few file formats, namely JPG, JPEG and BMP. All in all, PicturExtractor is a nice, simple app, with an easy-to-use interface that shouldn't raise any problems for less experienced users.
